

The SilverDane Stubbing Application is a scheduled application that replaces messages in the GroupWise users' database with a stub (or shortcut) to the archived version of this message. The stubbing occurs on a set criteria of either size or age. This process reduces the size of the GroupWise Message and Attachment stores to provide a better performing & easier to manage GroupWise system

Stores Attachments  
Stores HTML Messages

SilverDane Attachment Storage (NTFS/NSS)

Provides user interface and renders information stored in Database & attachment store

SilverDane Web Server  
Java Web Server  
Enterprise Edition

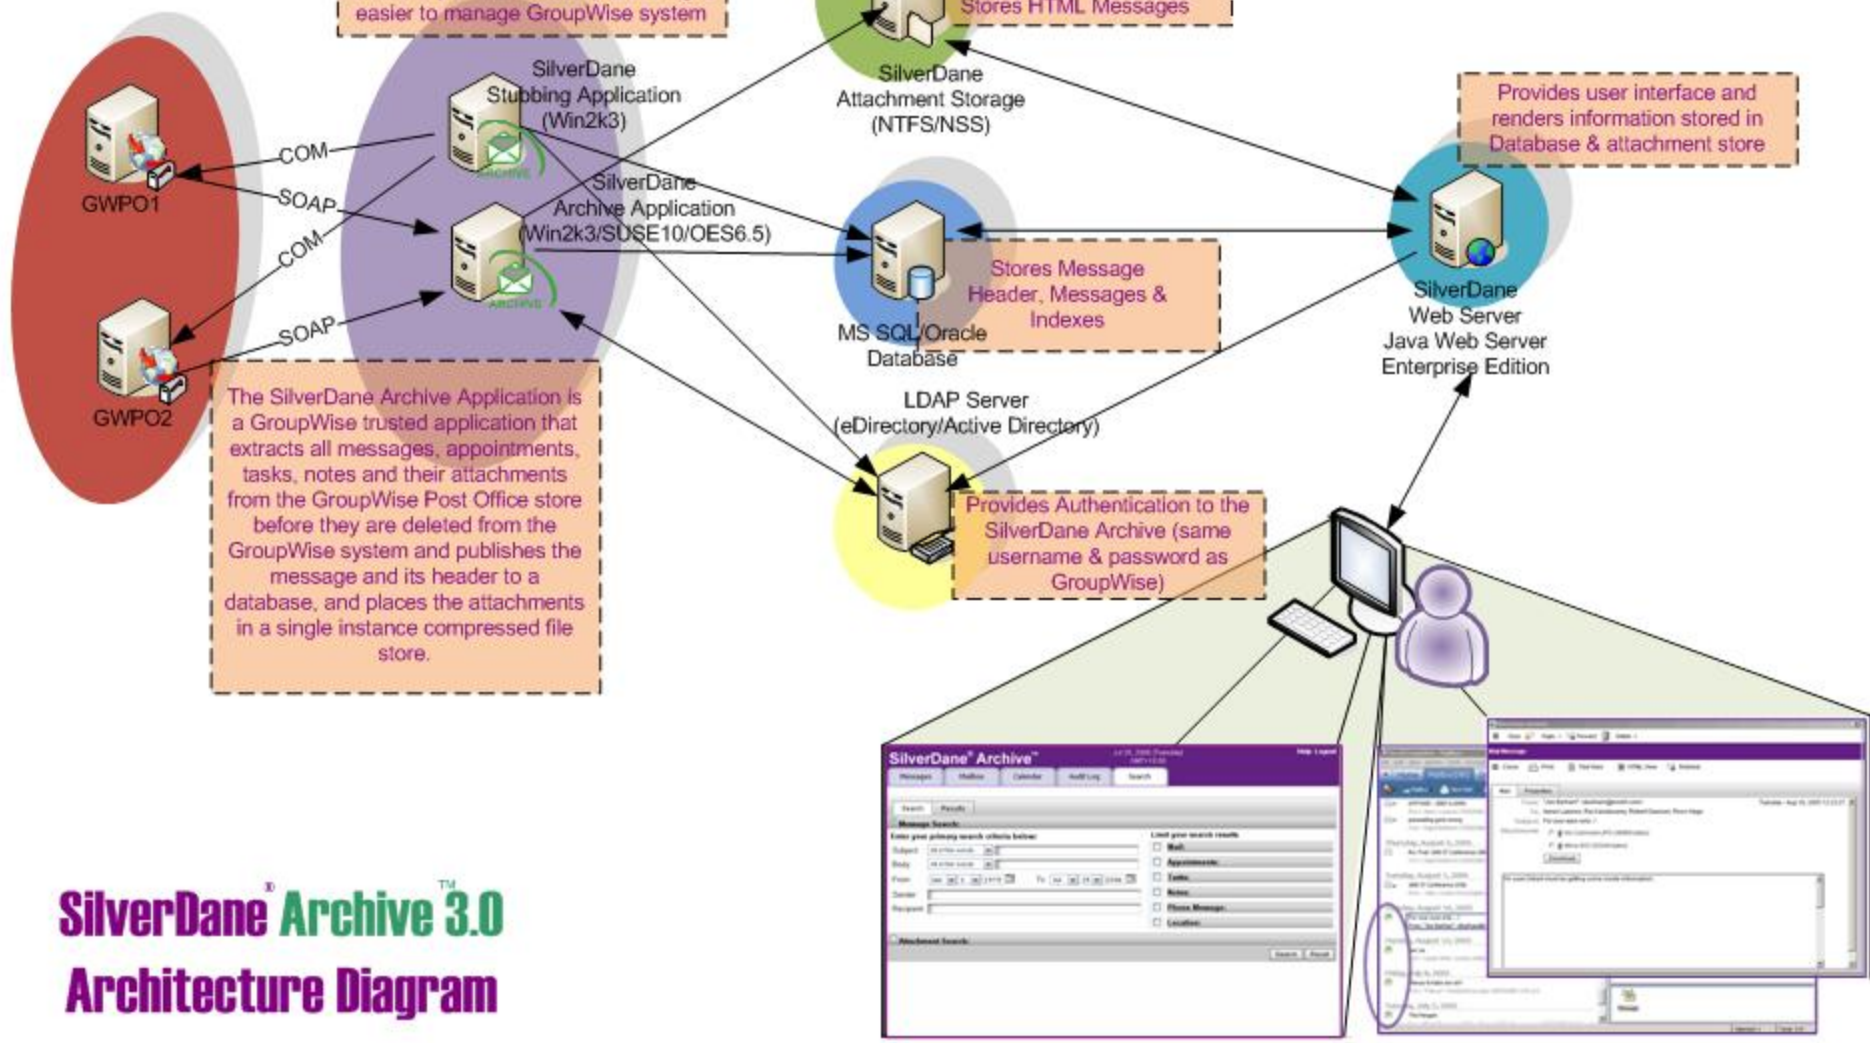

Stores Message Header, Messages & Indexes

MS SQL/Oracle Database

Provides Authentication to the SilverDane Archive (same username & password as GroupWise)

LDAP Server (eDirectory/Active Directory)

The SilverDane Archive Application is a GroupWise trusted application that extracts all messages, appointments, tasks, notes and their attachments from the GroupWise Post Office store before they are deleted from the GroupWise system and publishes the message and its header to a database, and places the attachments in a single instance compressed file store.
